

As an actor I am used to playing roles and hiding my true identity. But in real life I want to make sure that nobody can play with my actual identity. Biocryptology gives me this peace of mind: it allows me to reveal my identity in a secure fashion, while keeping it protected against hackers at all times.

Biocryptology offers its solution through a straightforward and free downloadable app and through the Swipe ID, a small personal device for military grade security that can easily fit in your pocket. It will make my personal life a lot easier and I also expect to incorporate it in recording studios and film sets for secure access to restricted areas.

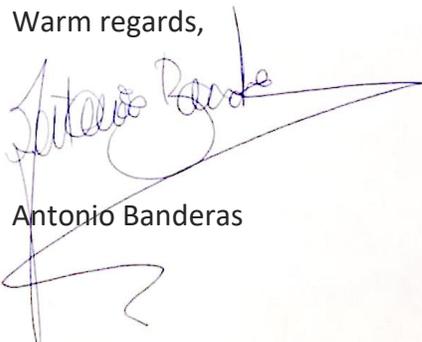

Biocryptology has the potential to become the worldwide standard for identification, because it is highly versatile, it can easily be integrated in existing systems and is very scalable. Apart from the high level of security Biocryptology offers, I especially appreciate the universal platform for convenient and secure access to many kinds of online and offline places. It's a single solution for secure access to e-commerce, websites, cloud storage, online banking, my workplace, home and car as well as member clubs, stadiums, gyms, and much more. You are probably just as delighted as I am to get rid of all those smartcards, passwords, confirmation codes, usernames, entry tickets, etc.

On the website, you can read everything about the security details of Biocryptology, however I do want to mention a few elements that appealed most to me: these are the fact that fingerprints are not stored in their system (just simplified representations, not of value to criminals) and that the Universal Matching Base avoids the need to register and leave your fingerprint with third parties. Furthermore, all the hardware and software is developed in-house. All these elements secure me with maximum protection against identity fraud.

I strongly believe that Biocryptology is a true game changer in the way that we identify and protect ourselves. I am very proud to form part of this exciting new technology and to be involved in its early stages.

In an age where identity fraud is increasing every day, I feel that we must take our own precautions and make sure that we protect our identities. I highly recommend Biocryptology as a very convenient, high security, all-in-one solution for protecting your life both online and offline.

Warm regards,

Antonio Banderas
